Versa Tach Digital Wireless Tachometer

The Model 321 incorporates wireless capability as well as interchangeable inductive and capacitive secondary clamp on pickups. The wireless feature provides for quick RPM checks and readings where secondary spark plug wires are inaccessible. The inductive pick-up provides noise free, accurate tachometer readings with (1200°F), heat protected leads of up to twenty feet. The capacitive clip on pick-up allows for hands free engine adjustment where secondary wires are too short to allow entry of an inductive pick-up.

Selector switches allow for direct readings of (4) and (2) cycle engines firing up to three times per revolution. As a result you'll see true RPM readings, regardless of multiple firings per engine revolution. RPM's may be viewed in ranges from 1 to 10,000 in 10 RPM increments, and from 1 to 20,000 in 100 RPM increments. An RPM hold switch captures and holds the maximum engine speed, if desired, until re-set. A spark indicator LED indicates presence of secondary coil output and will detect misfire. Auto shut-off will occur two minutes after spark input ceases.

1-year warranty. Inductive pick-up included. Capacitive pick-up, carrying case, 10' and 20' inductive pick-ups are optional equipment.
