SAFETY, ACCESSIBILITY, EASE

FLOATSTEP™ DOCK LADDER

SAFE ACCESS

With traditional ladders, the step welds are more vulnerable to electrolysis and corrosion due to constant submersion. This huge safety concern is eliminated with the FloatStep™ dock ladder.

Accessibility translates into **SAFETY** with the patent-pending FloatStep™ dock ladder. As the FloatStep™ ladder rises and falls with the water level, you know the ladder is ready and available for use when you need it most!

FloatStep™ will assist in reducing liability and maintenance!

The FloatStep™ float, made of impact resistant plastic and protected with a marine growth inhibitor, acts as the bottom rung of the ladder. The buoyancy of the float allows for easy deployment.

So easy that even a small child can activate the ladder, safely reaching the dock.

When not in use, the FloatStep™ ladder remains free of hazardous marine growth, leaving you with a virtually maintenance free product.

How to measure for your new FLOATSTEP™ Dock Ladder

1. Measure from the top of your dock to the lowest water mark.
2. Add a minimum of one (1) foot to measurement. *

Example:

3 ft. (from top of dock to low water)
+1 ft. *

= 4 Step FLOATSTEP™ Ladder

*Adding the additional length to the measurement will allow for safe and constant ladder availability.

ORDER NO.	DESCRIPTION	PRICE
FSL STD03S	3 STEP	\$399.00
FSL STD04S	4 STEP	\$449.00
FSL STD05S	5 STEP	\$499.00
FSL STD06S	6 STEP	\$559.00
FSL STD07S	7 STEP	\$589.00
FSL STD08S	8 STEP	\$619.00
