

JABSCO

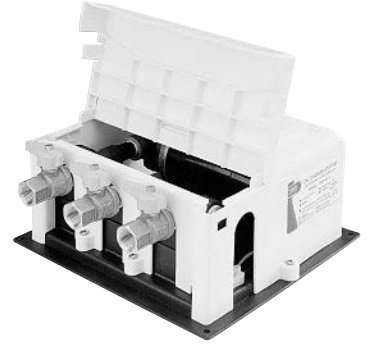

Jabsco Engine Oil Changing System

Makes onboard oil changing of multiple engines a clean and easy task.

The Jabsco Oil Change System consists of a powerful reversible flexible impeller pump and a multi-valve distribution manifold mounted on an easy to install platform, to make onboard oil changing of multiple engines a clean and easy task.

The standard system is supplied with a five way manifold, fitted with three brass ball valves. Two additional ports (plugged from the factory) can be fitted with valves to allow the system to serve up to five different devices.

The powerful flexible impeller pump will remove old engine oil and then with a flip of the pump's reversing switch will refill the engine with a supply of new oil. Close one manifold valve and open another and the simple process can be repeated again until all engine and/or transmission oil reservoirs are refreshed.
